

ChemDraw native review / R2

13 September 2026 | Diagnostic checkpoint | Not P0 or release acceptance

S1 AUTOMATED CHECKS PASSED

Alanine zwitterion

Native stereochemistry and formal charges

85 mm native canvas - use Actual size / 100%

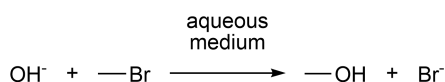

Graph, native hydrogen counts, isotopes and input tetrahedral stereo preserved.

Exact native edits survived CDX and CDXML reopening. Full native mask checks passed.

Owner physical-size review is pending. No absolute CIP label is claimed.

R1 AUTOMATED CHECKS PASSED

Nucleophilic substitution

85 mm native canvas - use Actual size / 100%

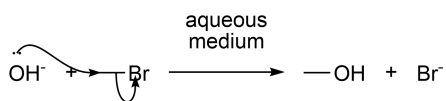

Neutral product and reaction participants preserved. Native 8 pt labels and measured spacing checked.

Exact condition-text edits survived both native formats. Full native mask checks passed.

Owner physical-size review is pending.

M1 QUALITY FAILED - RETAINED OUTPUT

SN2 electron flow

Two simultaneous electron-pair moves

85 mm native canvas - use Actual size / 100%

Latest complete M1: automatic repair 1. Chemistry, H counts and exact edit/reopen checks passed.

Native masks detect a curve touching the separator and a visible arrowhead touching Br.

Repair 2 failed Composer preflight before native M1. Budget exhausted; M2 scoring remains not started.

Each native canvas is 85 x 42 mm. Native text: 8 pt; nominal bond: 14.4 pt; stroke: 0.6 pt.

Unmodified source PNGs: 2044 x 1028 px. Approx. 600 DPI canvas scale plus independent native ink calibration.

Embedded PNG metadata is approx. 144 DPI; this PDF uses measured native geometry for placement.

This review PDF is an assembly of native images, not a native ChemDraw PDF export. Human correction time: unmeasured.

Stereo method: Daylight Theory, section 3.3.3 (daylight.com/dayhtml/doc/theory/theory.smiles.html).
